

ABSTRACT

The invention relates to immunostimulatory nucleic acid compositions and methods of using the compositions. The T-rich nucleic acids contain poly T sequences
5 and/or have greater than 25% T nucleotide residues. The TG nucleic acids have TG dinucleotides. The C-rich nucleic acids have at least one poly-C region and/or greater than 50% c.nucleotides. These immunostimulatory nucleic acids function in a similar
manner to nucleic acids containing CpG motifs. The invention also encompasses preferred CpG nucleic acids.
